

Prompt Set for Barakode Technologies Website

How to use this

Use these prompts in this order:

1. Master Website System Prompt
2. Homepage Prompt
3. Services Page Prompt
4. AI Automation Page Prompt
5. MVP & SaaS Product Development Page Prompt
6. Custom Web & Mobile App Development Page Prompt
7. Internal Business Systems Page Prompt
8. Cloud, DevOps & Maintenance Page Prompt
9. UI/UX Product Design Page Prompt
10. Case Studies Page Prompt
11. Individual Case Study Template Prompt
12. About Page Prompt
13. Process Page Prompt
14. Engagement Models Page Prompt
15. Contact Page Prompt
16. FAQ Page Prompt
17. Blog / Insights Page Prompt
18. Technologies Page Prompt
19. Footer + Navigation Prompt

1. Master Website System Prompt

Create a premium, modern, enterprise-level, responsive B2B website design system for:

Company Name:

Barakode Technologies

Website:

<https://www.barakodetechnologies.com/>

New Positioning:

Product Engineering & AI Automation Partner

Core Description:

Barakode Technologies helps startups and growing businesses build scalable web apps, mobile apps, SaaS platforms, internal business systems, and AI-powered workflows.

Website Goal:

The website should position Barakode Technologies as a serious international product engineering and AI automation partner, not a cheap local software agency.

Target Audience:

- Startup founders
- SaaS founders
- Business owners
- Growing companies
- Agencies needing technical partners
- Companies with manual workflows
- Businesses needing internal systems
- Companies interested in AI automation
- International clients looking for reliable software development partners

Primary Services:

1. MVP & SaaS Product Development
2. Custom Web & Mobile App Development
3. AI Automation & AI Integration
4. Internal Business Systems
5. Cloud, DevOps & Product Maintenance
6. UI/UX Product Design as a supporting service

Important:

Do not promote digital marketing as a primary service.

Tone:

Professional, clear, human, confident, direct, consultative, premium, enterprise-level, not too salesy, not overly corporate.

Avoid these phrases:

- We are passionate about digital transformation
- We provide innovative solutions
- We empower businesses
- One-stop digital agency
- Smart digital solutions

- Next-gen digital agency
- Your trusted partner for everything
- Transforming ideas into reality

Use stronger language like:

- We build scalable software products.
- We turn manual workflows into reliable digital systems.
- We help businesses launch, automate, and scale with modern software.
- We design and develop web, mobile, SaaS, and AI-powered systems built around real business needs.

Critical Credibility Rules:

Do not create fake statistics.

Do not create fake testimonials.

Do not create fake awards.

Do not create fake client logos.

Do not use placeholder metrics like “0+ clients”, “0M lines of code”, “0% on-time delivery”, or “from \$0/project”.

Use these placeholders instead:

[Add verified client logo]

[Add real testimonial]

[Add verified case study result]

[Add real project screenshot]

[Add real team photo]

[Add verified award only if real]

Visual Style:

Create a premium B2B SaaS/product engineering website style.

The website should feel:

- Premium
- Modern
- Enterprise-level
- International
- Technical
- Trustworthy
- Conversion-focused
- Product-focused
- AI-enabled
- Clean and professional

Design Direction:

- Deep navy, charcoal, or near-black as the primary dark color
- White or off-white clean background
- Electric blue, cyan, teal, or violet-blue accent
- Muted gray/slate supporting text
- Subtle gradients
- Clean product UI mockups
- AI workflow diagrams
- SaaS dashboard previews
- Modern cards
- Strong typography
- Large spacing
- Clear CTAs
- Technical grid patterns
- Subtle motion only

Avoid:

- Cheap stock photos
- Cartoon characters
- Fake laptop images
- Random AI robot graphics
- Overused purple/neon templates
- Too many colors
- Heavy animations
- Cluttered layouts

Typography:

Use modern sans-serif typography.

Headings should be bold, clean, and premium.

Body text should be readable.

Suggested hierarchy:

- Desktop H1: 56 to 72px
- Desktop H2: 40 to 52px
- H3: 24 to 32px
- Body: 16 to 18px
- Mobile H1: 36 to 44px

Buttons:

Primary CTA button:

Solid accent color, premium hover state, strong contrast.

Secondary CTA:

Outline or subtle background.

Main CTA:
Book a Strategy Call

Secondary CTA:
View Our Work

Supporting CTA:
Send Project Details

Navigation:
Header menu:

- Services
- AI Automation
- Case Studies
- Process
- Engagement Models
- About
- Contact

Header CTA:
Book a Strategy Call

Services dropdown:

- MVP & SaaS Product Development
- Custom Web & Mobile App Development
- AI Automation & AI Integration
- Internal Business Systems
- Cloud, DevOps & Maintenance
- UI/UX Product Design

Responsive Rules:

Desktop:

Use strong two-column hero sections, spacious layout, 3-column cards, premium visual hierarchy.

Tablet:

Use 2-column grids and comfortable spacing.

Mobile:

Use single-column stacking, large readable text, full-width buttons, hamburger menu, accordions for long content, and simple forms.

Accessibility:

- Strong color contrast
- Body text minimum 16px
- Keyboard-friendly navigation
- Proper labels for forms
- Visible focus states
- Descriptive alt text
- Clear heading hierarchy

Performance:

- Optimized images
- WebP/AVIF where possible
- Lazy load below-the-fold media
- Minimal heavy animations
- Fast above-the-fold load
- Clean responsive layout

Create all pages using consistent components:

- Header
 - Footer
 - Hero
 - Service cards
 - Process timeline
 - CTA banners
 - Case study cards
 - FAQ accordion
 - Contact form
 - Technology badges
 - Engagement model cards
 - Team cards
 - Trust signal sections
-

2. Homepage Prompt

Create the homepage for Barakode Technologies using the brand system already defined.

Page Goal:

Make visitors immediately understand that Barakode is a Product Engineering & AI Automation Partner. The homepage must build trust, explain services, show practical AI capability, and drive visitors toward a strategy call or project inquiry.

Homepage Sections:

1. Hero Section
2. Trust Signal Section
3. Problem Section
4. Services Overview
5. AI Automation Highlight
6. Product Engineering Process
7. Case Study Preview
8. Technologies / Tools Section
9. Why Choose Barakode
10. Engagement Models Preview
11. FAQ Preview
12. Final CTA

Hero Section:

Eyebrow:

Product Engineering & AI Automation Partner

Headline:

Build scalable software products and AI-powered workflows.

Subheadline:

Barakode Technologies helps startups and growing businesses build web apps, mobile apps, SaaS platforms, internal systems, and AI-enabled workflows designed around real business needs.

CTA Buttons:

Book a Strategy Call

View Our Work

Trust Bullets:

- MVP, SaaS, web, mobile, and internal systems
- Practical AI automation and workflow integration
- Product strategy, design, development, launch, and support

Hero Visual:

Create a premium product interface mockup showing:

- SaaS dashboard
- AI workflow layer
- Mobile app preview
- API/integration connections
- Admin panel feel

Trust Signal Section:

Headline:

Trusted for product builds, automation, and scalable software delivery.

Copy:

Use this section only for verified proof. If verified logos, testimonials, or results are not available, show project categories instead of fake statistics.

Trust Cards:

- SaaS & MVP Platforms
- Web & Mobile Apps
- AI Workflows
- Internal Systems
- Cloud & Maintenance

Placeholders:

[Add verified client logos only]

[Add real testimonials only]

[Add verified platform reviews only]

Problem Section:

Headline:

Your business does not need more random software. It needs the right system.

Copy:

Many companies start with an idea, a manual process, or a disconnected set of tools. The challenge is turning that into software that is clear, usable, scalable, and reliable.

That is where Barakode helps. We work with you to understand the business problem, plan the product, design the user experience, build the system, integrate the right technology, and support it after launch.

Problem Cards:

- Product idea without a clear technical plan
- Manual operations slowing the team down
- Spreadsheets and tools that do not connect
- Existing software that needs rebuilding or scaling
- AI ideas that need practical implementation
- Poor UX causing low adoption

Services Overview:

Headline:

Product engineering services for modern businesses.

Intro:

Whether you are launching a new SaaS product, improving an existing platform, building an internal dashboard, or automating manual workflows with AI, Barakode gives you the technical team and process to move from idea to execution.

Create 6 service cards:

1. MVP & SaaS Product Development

Copy:

Launch your product with the right foundation. We help define, design, build, and ship MVPs and SaaS platforms with scalable architecture and clean user experiences.

CTA:

Explore MVP & SaaS Development

2. Custom Web & Mobile App Development

Copy:

Build web and mobile applications tailored to your users, workflows, and business model. From customer-facing platforms to operational apps, we handle product design, development, and deployment.

CTA:

Explore Web & Mobile Development

3. AI Automation & AI Integration

Copy:

Use AI where it creates real operational value. We build AI assistants, RAG chatbots, document processing workflows, reporting automation, and tool integrations that reduce manual work.

CTA:

Explore AI Automation

4. Internal Business Systems

Copy:

Replace spreadsheets, manual tracking, and disconnected tools with custom dashboards, portals, CRM workflows, admin panels, and business management systems.

CTA:

Explore Internal Systems

5. Cloud, DevOps & Product Maintenance

Copy:

Keep your product stable, secure, and ready to scale. We help with deployment, cloud setup, CI/CD, monitoring, optimization, and long-term maintenance.

CTA:

Explore Maintenance & DevOps

6. UI/UX Product Design

Copy:

Design clear, usable, and conversion-focused product experiences before development begins. We create product flows, wireframes, prototypes, and design systems.

CTA:
Explore UI/UX Design

AI Automation Highlight:

Headline:

AI automation that fits your business workflow.

Copy:

AI should not be added just because it is trending. It should solve a clear business problem.

Barakode helps companies identify where AI can reduce manual work, improve response times, organize knowledge, support customers, process documents, and connect business tools. We design AI workflows with human review, data privacy, and practical implementation in mind.

Use Case Cards:

- AI chatbots trained on business knowledge
- RAG assistants for documents and internal knowledge
- CRM and sales workflow automation
- Customer support automation
- Document extraction and classification
- Reporting and data summarization
- AI agents for repetitive internal tasks
- Integrations with existing business tools

CTA:
Explore AI Automation

Visual:

Create a before/after workflow:

Manual Process → AI Workflow Layer → Human Review → Business Output

Process Section:

Headline:

A clear process from first idea to working product.

Copy:

Good software does not happen by accident. We follow a structured product engineering process that helps reduce confusion, manage scope, improve communication, and deliver software that is easier to build, test, launch, and maintain.

Steps:

1. Discovery & Requirement Mapping
2. Product Strategy & UX Planning
3. UI Design & Prototyping

4. Development Sprint Planning
5. Full-Stack Development
6. AI/Automation Integration
7. QA, Testing & Deployment
8. Maintenance, Scaling & Support

CTA:

See Our Process

Case Study Preview:

Headline:

Selected work with real project context.

Copy:

Every case study should explain what was built, why it mattered, what Barakode delivered, which technologies were used, and what changed for the business. No fake numbers. No inflated claims. Only proof that can be verified.

Create 3 case study cards using placeholders:

[Project Name]

[Client Type]

[Problem Solved]

[Services Delivered]

[Tech Stack]

[Verified Result, if available]

[Real Screenshot]

CTA:

View Case Studies

Technologies Section:

Headline:

Technologies we use to build modern products.

Create grouped technology badges:

Frontend:

React, Next.js, TypeScript

Backend:

Node.js, NestJS, Python, Django, FastAPI

Mobile:

React Native, Flutter

AI:

OpenAI, LangChain, RAG pipelines, vector databases

Cloud:

AWS, Azure, Docker, Kubernetes

Database:

PostgreSQL, MongoDB, MySQL

Design:

Figma, Design Systems, Prototyping

Why Choose Barakode:

Headline:

Built for teams that need more than code.

Copy:

Barakode is built for clients who need more than developers. We bring product thinking, technical planning, UI/UX clarity, full-stack execution, AI automation capability, and ongoing support into one structured delivery process.

Value Cards:

1. Product-first approach
We start with the business problem, user journey, and product goal before writing code.
2. Practical AI implementation
We focus on AI workflows that improve real operations, not demos that look good but fail in practice.
3. Full-stack delivery
We support the full product lifecycle from planning and design to backend, frontend, mobile, cloud, QA, and maintenance.
4. Clear communication
You get structured updates, transparent scope, and a team that understands business priorities.
5. Built for scale
We design systems with architecture, maintainability, performance, and future growth in mind.

Engagement Models Preview:

Headline:

Flexible ways to work with Barakode.

Cards:

- MVP Sprint
- Custom Product Build
- AI Automation Sprint
- Dedicated Product Team
- Maintenance & Support

CTA:

Find the Right Engagement Model

FAQ Preview:

Create an FAQ accordion with:

- What type of projects does Barakode work on?
- Do you work with startups?
- Can you help with an existing product?
- Do you offer AI automation?
- How do you manage communication?
- Will we own the code?
- Can you sign an NDA?
- How do pricing and timelines work?

Final CTA:

Headline:

Ready to build or improve your software product?

Copy:

Tell us what you are trying to build, automate, or scale. We will help you identify the right technical direction and next steps.

CTA:

Book a Strategy Call

Secondary CTA:

Send Project Details

3. Services Page Prompt

Create the main Services page for Barakode Technologies.

Page Goal:

Make Barakode's services clear, focused, and product-oriented. The page should not feel like "we do everything." It should package services around product engineering, AI automation, and business systems.

Hero:

Eyebrow:

Services

Headline:

Software product development and AI automation services.

Copy:

Barakode helps startups and growing businesses build scalable products, improve existing systems, and automate manual workflows through structured product engineering.

CTA:

Discuss Your Project

Page Structure:

1. Hero
2. Services Introduction
3. Six Detailed Service Sections
4. How These Services Work Together
5. Suggested Engagement Models
6. FAQ Preview
7. Final CTA

Services Introduction:

Headline:

From idea to launch, automation, and long-term support.

Copy:

Whether you are building a new MVP, scaling an existing platform, replacing manual operations, or adding AI into your workflow, Barakode helps you plan, design, build, deploy, and improve the right software system.

Create detailed sections for these six services:

Service 1:

Title:

MVP & SaaS Product Development

Who it is for:

Startup founders, SaaS founders, early-stage product teams, businesses launching new products, agencies needing technical delivery.

Problem it solves:

You have a product idea, but you need a clear technical plan, UX structure, development team, and launch-ready MVP.

What Barakode delivers:

Product discovery, feature planning, user flows, UI/UX design, frontend development, backend

development, admin panel, authentication, payment integration, SaaS architecture, testing, and launch support.

Key features:

- Multi-role user systems
- Subscription models
- Dashboards
- Reporting
- Admin controls
- API integrations
- Cloud deployment

CTA:

Build Your MVP

Service 2:

Title:

Custom Web & Mobile App Development

Who it is for:

Businesses needing custom apps, startups building customer-facing platforms, companies modernizing old systems, teams needing web and mobile access.

Problem it solves:

Off-the-shelf tools do not match your business process, user needs, or growth plans.

What Barakode delivers:

Custom web applications, mobile apps, admin dashboards, user portals, APIs, backend systems, third-party integrations, testing, and deployment.

Key features:

- Responsive web apps
- iOS and Android apps
- Real-time features
- User accounts
- Notifications
- Payment systems
- Admin management
- Analytics

CTA:

Build a Custom App

Service 3:

Title:

AI Automation & AI Integration

Who it is for:

Companies with repetitive manual work, teams handling documents, support, reporting, CRM tasks, and SaaS products adding AI features.

Problem it solves:

Your team spends too much time on repetitive tasks, manual data handling, support responses, reporting, or searching through information.

What Barakode delivers:

AI workflow planning, AI chatbots, RAG assistants, AI agents, document processing, CRM automation, customer support automation, reporting automation, API integrations, and human review workflows.

Key features:

- LLM integration
- Knowledge base connection
- Vector search
- Prompt workflows
- Data extraction
- Tool integrations
- Admin controls
- Audit logs

CTA:

Automate With AI

Service 4:

Title:

Internal Business Systems

Who it is for:

Growing businesses, operations teams, sales teams, admin teams, companies using spreadsheets or manual processes.

Problem it solves:

Your team is managing important work through spreadsheets, WhatsApp, email threads, or disconnected tools.

What Barakode delivers:

Internal dashboards, CRM systems, operations portals, approval workflows, reporting systems, team management tools, client portals, and admin systems.

Key features:

- Role-based access
- Workflow tracking
- Notifications
- Reports
- File management
- Data filters
- Activity logs
- Integrations

CTA:

Build an Internal System

Service 5:

Title:

Cloud, DevOps & Product Maintenance

Who it is for:

Businesses with live products, SaaS platforms, apps needing performance improvements, and teams needing deployment and maintenance support.

Problem it solves:

Your product needs to stay fast, secure, stable, and ready to scale.

What Barakode delivers:

Cloud deployment, CI/CD setup, server configuration, monitoring, bug fixing, performance optimization, security updates, database management, and ongoing support.

Key features:

- AWS/Azure setup
- Docker deployment
- Backup planning
- Uptime monitoring
- Error tracking
- Performance audits
- Version updates

CTA:

Improve Product Stability

Service 6:

Title:

UI/UX Product Design

Who it is for:

Founders before development, companies redesigning products, SaaS teams improving usability, and agencies needing product design support.

Problem it solves:

Your product idea or existing system needs clear flows, better usability, and a polished interface before development.

What Barakode delivers:

UX audit, user flows, wireframes, UI design, clickable prototypes, design systems, developer handoff, and responsive screens.

Key features:

- Figma designs
- Component libraries
- Mobile-first design
- Dashboard design
- SaaS UI patterns
- Form UX
- Design documentation

CTA:

Design Your Product

How These Services Work Together:

Headline:

One product engineering partner for the full build cycle.

Copy:

Barakode can support one part of the project or the full lifecycle, from product planning and design to development, AI automation, deployment, maintenance, and scaling.

Final CTA:

Headline:

Have a product or workflow to build?

Copy:

Tell us what you are working on and we will help you identify the best technical path.

CTA:

Discuss Your Project

4. AI Automation Page Prompt

Create a dedicated AI Automation & AI Integration page for Barakode Technologies.

Page Goal:

Position Barakode as a practical AI automation partner. The page should not feel hype-based. It should show that Barakode builds useful AI workflows that reduce manual work, improve business operations, and connect with existing tools.

Hero:

Eyebrow:

AI Automation & AI Integration

Headline:

Practical AI automation for real business workflows.

Copy:

Barakode helps businesses use AI to automate manual tasks, connect internal knowledge, process documents, support customers, improve reporting, and build practical AI features into existing products.

CTA Buttons:

Book an AI Automation Call

Explore Use Cases

Hero Visual:

Create a clean AI workflow diagram showing:

Business Input → AI Workflow Layer → Human Review → System Update → Business Output

Page Sections:

1. Hero
2. What AI Automation Means
3. Problems AI Can Help Solve
4. AI Use Cases
5. Workflow Examples
6. AI Agents
7. RAG / Knowledge Assistants
8. Document Processing
9. Customer Support Automation
10. CRM and Reporting Automation
11. What Not to Automate
12. Responsible AI Note
13. Process
14. FAQ

15. CTA

What AI Automation Means:

Headline:

AI automation is not about replacing people. It is about reducing repetitive work.

Copy:

AI automation means using AI models, business rules, integrations, and software workflows to handle repetitive or information-heavy tasks that normally take human time. The goal is to make teams faster, more consistent, and better supported without losing human control.

Problems AI Can Help Solve:

Create cards:

- Repetitive support questions
- Manual document review
- Slow reporting
- Scattered internal knowledge
- CRM data entry
- Lead qualification
- Manual data movement
- Repetitive admin tasks

AI Use Cases:

Create cards for:

1. AI customer support assistant
2. RAG chatbot
3. Document processing
4. CRM automation
5. Reporting automation
6. Internal AI agents
7. SaaS AI features

Workflow Examples:

Use visual workflow cards:

Support Workflow:

Customer question → AI checks knowledge base → AI drafts answer → Human review if needed → Response sent → Ticket updated

Document Workflow:

Document uploaded → AI extracts key fields → System validates data → Human reviews exceptions → Data saved to dashboard

Sales Workflow:

Lead submits form → AI qualifies inquiry → CRM updated → Follow-up email drafted → Sales team notified

Reporting Workflow:

Data collected → AI summarizes changes → Dashboard updated → Report sent to team → Alerts triggered for issues

AI Agents Section:

Headline:

AI agents that support defined business tasks.

Copy:

An AI agent is a workflow assistant that can understand a task, use available tools, follow defined rules, and complete steps with human oversight where needed.

Agent examples:

- Lead qualification agent
- Internal knowledge assistant
- Reporting assistant
- Document review assistant
- CRM update assistant
- Customer support triage assistant

RAG / Knowledge Assistants:

Headline:

AI assistants connected to your company knowledge.

Copy:

RAG allows an AI assistant to answer based on selected business knowledge instead of only relying on general model knowledge. This is useful for company FAQs, product documentation, training manuals, policies, client documents, and internal SOPs.

Document Processing:

Headline:

Turn document-heavy work into structured workflows.

Use cases:

- Invoices
- Contracts
- Forms
- Reports
- Resumes
- PDFs

- Scanned documents, if OCR quality is good

Customer Support Automation:

Headline:

Support automation with clear limits and human escalation.

What can be automated:

- FAQs
- Ticket classification
- Suggested replies
- Knowledge search
- Escalation routing
- Support summaries

What should remain human-led:

- Sensitive complaints
- Refund decisions
- Legal issues
- Complex customer disputes
- High-value accounts

CRM and Reporting Automation:

Headline:

Connect AI with the tools your team already uses.

Use cases:

- Lead scoring
- Follow-up reminders
- Record updates
- Call summaries
- Email drafts
- Pipeline movement
- Task creation
- Weekly reports
- Sales summaries
- Operational dashboards

What Not to Automate:

Headline:

Not every process should be automated.

Do not automate blindly:

- Legal decisions
- Medical decisions
- Financial approvals
- Sensitive HR decisions
- High-risk customer conversations
- Anything requiring final human judgment
- Anything using poor-quality or unverified data

Responsible AI Note:

Headline:

AI should be useful, controlled, and responsible.

Copy:

AI systems should be designed with clear limits, human oversight, data privacy, permission controls, review workflows, and fallback options. Barakode presents AI as a tool for improving operations, not replacing all human decision-making.

Process:

1. AI opportunity discovery
2. Workflow mapping
3. Data and knowledge review
4. AI architecture planning
5. Prototype
6. Production build
7. QA and safety checks
8. Launch and improve

FAQ:

- Can AI automate our whole business process?
- Can you build an AI chatbot for our website?
- Can AI read documents and extract data?
- Can you connect AI with our CRM?
- Do you build AI into existing software?
- How do you keep AI safe and reliable?

Final CTA:

Headline:

Have a workflow you want to automate?

Copy:

Tell us how your team currently works and we will help you identify where AI can create practical value.

CTA:
Book an AI Automation Call

5. MVP & SaaS Product Development Page Prompt

Create the MVP & SaaS Product Development service page for Barakode Technologies.

Page Goal:

Show startup founders and SaaS founders that Barakode can help them plan, design, build, launch, and improve scalable MVPs and SaaS platforms.

Hero:

Eyebrow:

MVP & SaaS Product Development

Headline:

Launch your product with the right technical foundation.

Copy:

Barakode helps founders and growing teams turn product ideas into scalable MVPs and SaaS platforms with clear planning, product-focused UI/UX, full-stack development, testing, launch support, and ongoing improvement.

CTA Buttons:

Plan Your MVP

Book a Strategy Call

Hero Visual:

Create a premium SaaS dashboard mockup with:

- User dashboard
- Admin panel
- Subscription/payment module
- Analytics preview
- Mobile preview

Page Sections:

1. Hero
2. Who This Is For

3. Problem Section
4. What Barakode Builds
5. Common SaaS Features
6. MVP Development Process
7. Tech Stack
8. Engagement Model
9. Case Study Placeholder
10. FAQ
11. Final CTA

Who This Is For:

- Startup founders
- SaaS founders
- Product teams
- Agencies needing development partners
- Businesses launching new digital products

Problem Section:

Headline:

A good MVP is not just a smaller version of a big product.

Copy:

An MVP needs the right feature focus, user flow, architecture, and launch plan. Without that structure, teams often build too much, build the wrong thing, or create a product that becomes difficult to scale later.

Problems:

- Unclear product scope
- Too many features too early
- Weak user flow
- No scalable backend plan
- Poor admin visibility
- No roadmap after launch
- No technical partner to guide decisions

What Barakode Builds:

- MVPs
- SaaS platforms
- Web applications
- Admin dashboards
- User portals
- Subscription systems
- Multi-role products

- API-driven platforms
- Internal product tools
- Mobile-connected SaaS products

Common SaaS Features:

- User authentication
- Role-based access
- Subscription billing
- Admin dashboards
- Customer dashboards
- Notifications
- Reports and analytics
- File uploads
- API integrations
- Payment gateways
- Team management
- Activity logs

MVP Development Process:

1. Discovery and product goal mapping
2. Feature prioritization
3. UX flows and wireframes
4. UI design and prototype
5. Architecture planning
6. Full-stack development
7. QA and launch
8. Post-launch improvements

Tech Stack:

Frontend:

React, Next.js, TypeScript

Backend:

Node.js, NestJS, Python, Django, FastAPI

Database:

PostgreSQL, MongoDB, MySQL

Cloud:

AWS, Azure, Docker

Design:

Figma, design systems, prototyping

Engagement Model:

Recommend:

MVP Sprint or Custom Product Build

Copy:

For early-stage products, we usually begin with a focused MVP Sprint. For larger platforms, we create a custom product build plan based on features, integrations, timeline, and long-term product goals.

Case Study Placeholder:

Use:

[Add real MVP/SaaS case study]

[Add verified project screenshot]

[Add real result only if verified]

FAQ:

- How long does it take to build an MVP?
- Can you help us define the first version?
- Do you build SaaS subscription systems?
- Can you work with our existing designs?
- Can you maintain the product after launch?
- Will we own the code?

Final CTA:

Headline:

Have a SaaS idea or MVP to build?

Copy:

Share your product goals and we will help you define the right first version, technical scope, and launch path.

CTA:

Plan Your MVP

6. Custom Web & Mobile App Development Page Prompt

Create the Custom Web & Mobile App Development page for Barakode Technologies.

Page Goal:

Show that Barakode can build custom web and mobile applications tailored to business workflows, users, and growth needs.

Hero:

Eyebrow:

Custom Web & Mobile App Development

Headline:

Build custom apps designed around your users and business workflows.

Copy:

Barakode designs and develops web and mobile applications for startups, businesses, and teams that need software built around their real operations, not generic templates.

CTA Buttons:

Build a Custom App

Book a Strategy Call

Hero Visual:

Create a split visual with:

- Web dashboard
- Mobile app screens
- Backend/API connection lines
- Admin panel preview

Page Sections:

1. Hero
2. Who This Is For
3. Problem Section
4. What We Build
5. Key Features
6. Development Process
7. Tech Stack
8. Case Study Placeholder
9. FAQ
10. Final CTA

Who This Is For:

- Businesses needing custom applications
- Startups building customer-facing platforms
- Companies modernizing old software
- Teams needing web and mobile access

- Agencies needing technical delivery support

Problem Section:

Headline:

Generic tools do not always fit how your business works.

Copy:

Many businesses outgrow spreadsheets, plugins, templates, and disconnected tools. Custom apps help create a better user experience, stronger workflow control, and software that matches the way the business actually operates.

Problems:

- Existing tools do not fit the process
- Users need a better app experience
- Business data is scattered
- Manual work slows operations
- Old systems are difficult to maintain
- Mobile access is missing

What We Build:

- Customer-facing web apps
- Mobile apps
- Business portals
- Admin dashboards
- Booking systems
- Marketplace platforms
- CRM-connected apps
- Real-time applications
- Internal team apps
- Reporting systems

Key Features:

- Responsive web interface
- iOS and Android app support
- User authentication
- Role-based access
- Notifications
- Payment integration
- Admin controls
- API integrations
- Reports and analytics
- File management
- Real-time updates

Development Process:

1. Requirement mapping
2. UX planning
3. UI design
4. Technical architecture
5. Frontend and mobile development
6. Backend and API development
7. Integrations
8. QA and deployment
9. Maintenance and improvement

Tech Stack:

Frontend:

React, Next.js, TypeScript

Mobile:

React Native, Flutter

Backend:

Node.js, NestJS, Python, Django, FastAPI

Database:

PostgreSQL, MongoDB, MySQL

Cloud:

AWS, Azure, Docker

Case Study Placeholder:

[Add real web/mobile app case study]

[Add real screenshots]

[Add verified result only if available]

FAQ:

- Do you build both web and mobile apps?
- Can you redesign an existing app?
- Can you integrate payments?
- Can you build admin dashboards?
- Can you maintain the app after launch?
- Can you work with our internal team?

Final CTA:

Headline:

Need a custom web or mobile app?

Copy:

Tell us what you are trying to build and we will help you define the right technical approach.

CTA:

Build a Custom App

7. Internal Business Systems Page Prompt

Create the Internal Business Systems page for Barakode Technologies.

Page Goal:

Position Barakode as a partner for businesses that want to replace manual workflows, spreadsheets, WhatsApp tracking, and disconnected tools with custom internal systems.

Hero:

Eyebrow:

Internal Business Systems

Headline:

Turn manual operations into reliable digital systems.

Copy:

Barakode helps growing businesses build internal dashboards, CRM workflows, operations portals, reporting systems, and admin tools that make daily work easier to manage.

CTA Buttons:

Build an Internal System

Discuss Your Workflow

Hero Visual:

Create an internal dashboard mockup showing:

- Workflow status
- Team tasks
- Reports
- CRM pipeline
- Admin controls

Page Sections:

1. Hero
2. Problem Section
3. What We Build

4. Common Workflow Examples
5. Key Features
6. Business Benefits
7. Process
8. Tech Stack
9. Case Study Placeholder
10. FAQ
11. Final CTA

Problem Section:

Headline:

Spreadsheets and disconnected tools slow teams down.

Copy:

As companies grow, manual tracking becomes harder to manage. Teams start relying on spreadsheets, WhatsApp, email threads, and disconnected tools. This creates confusion, missed updates, duplicate work, and weak visibility.

Problems:

- Manual tracking
- No central dashboard
- Poor reporting
- Scattered customer data
- Slow approvals
- Repeated data entry
- No role-based visibility
- Hard to track team performance

What We Build:

- Internal dashboards
- CRM systems
- Operations portals
- Admin panels
- Approval workflows
- Reporting systems
- Inventory systems
- HR/admin tools
- Client portals
- Team management systems
- Workflow automation systems

Common Workflow Examples:

- Lead management

- Sales pipeline tracking
- Customer onboarding
- Task approvals
- Document review
- Staff management
- Inventory tracking
- Ticket management
- Reporting automation
- Client communication tracking

Key Features:

- Role-based access
- User management
- Workflow tracking
- Notifications
- Reports and analytics
- File uploads
- Search and filters
- Activity logs
- Data export
- Third-party integrations
- Admin controls

Business Benefits:

- Better visibility
- Less manual work
- Faster decisions
- Cleaner data
- Easier reporting
- Better team accountability
- Scalable operations

Process:

1. Workflow discovery
2. Current process mapping
3. System planning
4. UX and dashboard design
5. Development
6. Integrations
7. Testing
8. Training and support

Tech Stack:

Frontend:

React, Next.js, TypeScript

Backend:

Node.js, Python, Django, FastAPI

Database:

PostgreSQL, MongoDB, MySQL

Integrations:

CRM APIs, email tools, payment tools, reporting tools, Google Workspace, Slack, webhooks

Case Study Placeholder:

[Add real internal system case study]

[Add real dashboard screenshot]

[Add verified workflow improvement only if available]

FAQ:

- Can you replace our spreadsheets with a dashboard?
- Can you build a custom CRM?
- Can you connect our existing tools?
- Can different users have different access?
- Can reports be automated?
- Can you maintain the system long-term?

Final CTA:

Headline:

Still managing operations manually?

Copy:

Share your current workflow and we will help you turn it into a reliable internal system.

CTA:

Discuss Your Workflow

8. Cloud, DevOps & Maintenance Page Prompt

Create the Cloud, DevOps & Product Maintenance page for Barakode Technologies.

Page Goal:

Show that Barakode can support live products with deployment, monitoring, performance improvements, bug fixing, security updates, and long-term product maintenance.

Hero:

Eyebrow:

Cloud, DevOps & Product Maintenance

Headline:

Keep your product stable, secure, and ready to scale.

Copy:

Barakode helps teams deploy, maintain, monitor, optimize, and improve software products after launch so they stay reliable as users, features, and business needs grow.

CTA Buttons:

Improve Product Stability

Discuss Maintenance Support

Hero Visual:

Create a clean technical visual showing:

- Cloud architecture
- Deployment pipeline
- Monitoring dashboard
- Error tracking
- Product health indicators

Page Sections:

1. Hero
2. Problem Section
3. What We Support
4. Maintenance Services
5. DevOps Services
6. Product Improvement Services
7. Monitoring and Reliability
8. Engagement Model
9. FAQ
10. Final CTA

Problem Section:

Headline:

Launching software is only the beginning.

Copy:

A live product needs ongoing care. Bugs appear, dependencies change, users grow, performance issues surface, and new features are needed. Without proper maintenance, even a good product can become slow, unstable, or difficult to improve.

Problems:

- Slow performance
- Production bugs
- No monitoring
- Manual deployment
- Security updates ignored
- Scaling problems
- Poor backup setup
- No clear support process

What We Support:

- SaaS platforms
- Web applications
- Mobile apps
- Internal systems
- Admin dashboards
- APIs
- Backend systems
- AI workflows
- Cloud infrastructure

Maintenance Services:

- Bug fixing
- Feature improvements
- Version updates
- Security patches
- Database maintenance
- Performance optimization
- Backup support
- Technical support

DevOps Services:

- Cloud deployment
- CI/CD setup
- Docker setup
- Server configuration
- Environment management

- Monitoring setup
- Error tracking
- Release management

Product Improvement Services:

- UX improvements
- Feature expansion
- Dashboard improvements
- API improvements
- Performance audits
- Code cleanup
- Technical debt reduction

Monitoring and Reliability:

Headline:

Build confidence into your product operations.

Use cards:

- Uptime monitoring
- Error tracking
- Backup planning
- Performance reviews
- Security updates
- Deployment process
- Incident response
- Scaling support

Engagement Model:

Recommend:

Maintenance & Support monthly retainer

Copy:

Maintenance is usually handled through a monthly support plan based on the size, complexity, and criticality of the product.

FAQ:

- Can you maintain a product built by another team?
- Can you fix bugs in an existing app?
- Can you improve performance?
- Can you manage cloud deployment?
- Can you provide monthly support?
- Can you help scale a SaaS platform?

Final CTA:

Headline:

Need a reliable technical team for your live product?

Copy:

Tell us what you are currently running and where you need support. We will help you assess stability, maintenance needs, and next steps.

CTA:

Discuss Maintenance Support

9. UI/UX Product Design Page Prompt

Create the UI/UX Product Design page for Barakode Technologies.

Page Goal:

Position UI/UX as a supporting product design service that helps founders and businesses plan clear, usable, development-ready software experiences.

Hero:

Eyebrow:

UI/UX Product Design

Headline:

Design product experiences that are clear, usable, and ready to build.

Copy:

Barakode helps teams turn ideas, workflows, and product requirements into clean user flows, wireframes, prototypes, dashboards, mobile screens, and design systems ready for development.

CTA Buttons:

Design Your Product

Book a Strategy Call

Hero Visual:

Create a Figma-style product design mockup showing:

- Wireframes
- Dashboard UI
- Mobile screens
- Component system

- User flow diagram

Page Sections:

1. Hero
2. Why Product Design Matters
3. What We Design
4. UX Process
5. Deliverables
6. Design System Direction
7. Developer Handoff
8. Case Study Placeholder
9. FAQ
10. Final CTA

Why Product Design Matters:

Headline:

Good design reduces confusion before development starts.

Copy:

A clear product design helps teams understand user flows, feature priorities, screen structure, and development requirements before writing code. This reduces rework and improves the final product experience.

What We Design:

- SaaS dashboards
- Admin panels
- Mobile apps
- Web applications
- Client portals
- Internal systems
- CRM workflows
- AI assistant interfaces
- Reporting dashboards
- Landing pages for software products

UX Process:

1. Requirement review
2. User role mapping
3. User flows
4. Wireframes
5. UI design
6. Interactive prototype
7. Design system

8. Developer handoff

Deliverables:

- UX audit
- User flows
- Wireframes
- UI screens
- Mobile responsive screens
- Clickable prototype
- Component library
- Design system basics
- Developer handoff notes

Design System Direction:

Create a section showing:

- Buttons
- Forms
- Cards
- Tables
- Modals
- Navigation
- Dashboards
- Badges
- Alerts
- Empty states

Developer Handoff:

Headline:

Designs prepared for clean development.

Copy:

We prepare UI files with organized components, clear spacing, responsive states, and notes that help developers build efficiently.

Case Study Placeholder:

[Add real UI/UX project]

[Add real before/after screenshot]

[Add verified client feedback only if available]

FAQ:

- Can you design before development starts?
- Do you create clickable prototypes?
- Do you design SaaS dashboards?

- Can you redesign an existing product?
- Do you provide developer handoff?
- Can your team also build the product?

Final CTA:

Headline:

Have a product idea that needs clear design?

Copy:

Let's turn your idea, workflow, or rough concept into a product experience your users can understand.

CTA:

Design Your Product

10. Case Studies Page Prompt

Create the Case Studies page for Barakode Technologies.

Page Goal:

Build trust through proof-based project stories. Do not create fake results, fake clients, fake testimonials, or fake logos.

Hero:

Eyebrow:

Case Studies

Headline:

Real project stories, built around business problems.

Copy:

Explore selected projects showing what was built, why it was needed, how Barakode approached the solution, and what was delivered. Every case study should be based on verified project details, real screenshots, and accurate outcomes.

CTA:

Discuss a Similar Project

Page Sections:

1. Hero
2. Featured Case Study
3. Case Study Filters

4. Case Study Grid
5. Empty State Option
6. CTA Section

Filters:

- SaaS/MVP Platforms
- Web/Mobile Apps
- AI Automation/RAG/Chatbots
- Internal Dashboards/Business Systems
- Cloud/DevOps/Maintenance
- UI/UX Product Design

Case Study Card Layout:

Each card must include:

- Project name
- Client type
- Industry
- Service category
- Short challenge
- What Barakode delivered
- Tech stack
- Screenshot or UI preview
- Result, only if verified
- CTA: View Case Study

Use placeholders:

[Project Name]

[Client Type]

[Industry]

[Problem Solved]

[Services Delivered]

[Tech Stack]

[Verified Result, if available]

[Real Screenshot]

Empty State:

If real case studies are not ready, do not fake them.

Show this:

Headline:

Detailed case studies are being prepared.

Copy:

We are currently organizing selected project stories with verified screenshots, technology

details, and delivery context. In the meantime, you can contact us to discuss relevant work examples based on your project type.

CTA:

Ask for Relevant Work Examples

Final CTA:

Headline:

Want to see work related to your project?

Copy:

Tell us what you are building and we will share the most relevant examples based on your project type.

CTA:

Discuss Your Project

11. Individual Case Study Template Prompt

Create a reusable Individual Case Study page template for Barakode Technologies.

Page Goal:

Create an enterprise-level case study layout that can be reused for real projects. Do not invent fake client names, fake results, fake screenshots, or fake metrics.

Hero:

Use placeholders:

[Project Name]

[Client Type]

[Industry]

[Location, if approved]

[Timeline, if verified]

[Services Delivered]

Headline Format:

How Barakode helped [Client Type] build [Product/System Type]

Hero Copy:

Use a short summary:

Barakode worked with [Client Type] to design and develop [Project Type] that helped solve [Business Problem]. The project included [Key Features], [Technology], and [Barakode Role].

Page Sections:

1. Project Overview
2. Client Type
3. Challenge
4. Goals
5. Solution
6. Features Delivered
7. Tech Stack
8. Timeline
9. Barakode's Role
10. Results
11. Screenshots
12. Lessons Learned
13. CTA

Project Overview:

Create a summary card with:

- Project name
- Client type
- Industry
- Timeline
- Services
- Tech stack
- Engagement model

Challenge:

Headline:

The challenge

Copy placeholder:

[Describe the real business or technical problem. Explain what was not working, what was manual, what needed to improve, and why a custom solution was needed.]

Goals:

Use bullet list:

- [Goal 1]
- [Goal 2]
- [Goal 3]
- [Goal 4]

Solution:

Headline:

The solution Barakode delivered

Copy placeholder:

[Explain the system Barakode built, including user roles, core modules, integrations, dashboards, AI workflows, admin controls, and deployment.]

Features Delivered:

Use cards:

- User authentication
- Dashboard
- Admin panel
- Payment integration
- Notifications
- Reporting
- AI chatbot
- Document upload
- CRM integration
- Mobile app
- API layer

Only keep features that actually apply.

Tech Stack:

Create grouped badges:

Frontend:

[Technology]

Backend:

[Technology]

Database:

[Technology]

Mobile:

[Technology]

AI:

[Technology]

Cloud:

[Technology]

Integrations:
[Technology]

Timeline:
Use real timeline only.
Placeholder:
[Add verified timeline]

Barakode's Role:
Use checklist:

- Product strategy
- UI/UX design
- Frontend development
- Backend development
- Mobile development
- AI integration
- DevOps
- QA
- Maintenance

Only keep roles that actually apply.

Results:
Important:
Only include verified results.

Acceptable result examples:

- Launched MVP
- Reduced manual workflow steps
- Replaced spreadsheet process
- Improved admin visibility
- Enabled mobile access
- Created centralized reporting
- Supported user onboarding

Placeholder:
[Add verified result only]

Screenshots:
Use placeholders:
[Add dashboard screenshot]
[Add admin panel screenshot]
[Add mobile app screenshot]

[Add workflow diagram]

[Add before/after process diagram]

Lessons Learned:

Headline:

What made the project work

Bullets:

- Clear scope
- Early prototyping
- Strong communication
- Clean architecture
- User testing
- Better workflow mapping

Final CTA:

Headline:

Have a similar product or workflow to build?

Copy:

Tell us what you are working on and we will help you identify the right technical direction.

CTA:

Discuss Your Project

12. About Page Prompt

Create the About page for Barakode Technologies.

Page Goal:

Make Barakode feel real, credible, technical, and international. The page should communicate that Barakode is born in Pakistan but works with the world. Keep it professional, not overly emotional.

Hero:

Eyebrow:

About Barakode Technologies

Headline:

Born in Pakistan, building software for the world.

Copy:

Barakode Technologies is a product engineering and AI automation company helping startups and growing businesses build scalable digital products, internal systems, and practical AI-powered workflows.

CTA:

Work With Us

Page Sections:

1. Hero
2. Company Story
3. Mission
4. Vision
5. What Barakode Believes
6. How We Work
7. Team Section
8. Global Delivery
9. Trust Section
10. CTA

Company Story:

Headline:

We build software for businesses that need reliable execution.

Copy:

Barakode was created with a simple belief: strong software teams do not need to be limited by geography. From Pakistan, we work with businesses that need clear thinking, reliable engineering, and practical technology solutions.

Our focus is not to offer every digital service. Our focus is to help companies build products, automate workflows, and maintain systems that support real business growth.

Mission:

To help businesses build scalable software products and AI-enabled workflows that solve real operational problems.

Vision:

To become a trusted international product engineering partner for startups, SaaS founders, growing companies, and agencies that need reliable software delivery.

What Barakode Believes:

Create cards:

1. Clear requirements create better products
A strong project starts with understanding the business problem, the users, the workflows, and the expected outcome.
2. AI should be practical
AI should support real work, improve efficiency, and fit into existing systems. It should not be added for hype.
3. Good software needs structure
Architecture, design, development, testing, deployment, and maintenance all matter.
4. Communication is part of delivery
Clients should know what is happening, what is next, and what decisions are needed.
5. Long-term thinking matters
Products should be built in a way that supports future improvements, integrations, and scaling.

How We Work:

1. Understand the business goal
2. Map the product or workflow
3. Plan features and architecture
4. Design the user experience
5. Build in structured sprints
6. Test before launch
7. Support and improve after delivery

Team Section:

Headline:

The people behind Barakode.

Use placeholders:

[Add real team photo]

[Name]

[Role]

[Short bio]

[LinkedIn link]

Important:

Do not use stock photos for team members.

Global Delivery:

Headline:

Based in Pakistan. Built for international collaboration.

Copy:

Barakode works with clients across time zones through structured communication, clear

documentation, async updates, and planned meetings. Our delivery model is designed for remote collaboration, technical transparency, and long-term partnership.

Trust Section:

Use only verified proof:

[Add verified client logos]

[Add real testimonials]

[Add real project screenshots]

[Add verified platform reviews]

[Add certifications only if real]

Final CTA:

Headline:

Looking for a technical partner for your next product or workflow?

Copy:

Share your project goals and let's discuss the best way to build, automate, or improve your system.

CTA:

Book a Strategy Call

13. Process Page Prompt

Create the Process page for Barakode Technologies.

Page Goal:

Show clients that Barakode follows a structured product engineering process from idea to launch and long-term support.

Hero:

Eyebrow:

Our Process

Headline:

A clear product engineering process from idea to launch.

Copy:

We follow a structured process that helps reduce confusion, control scope, improve communication, and deliver software that supports real business goals.

CTA:

Start Your Project

Page Sections:

1. Hero
2. Why Process Matters
3. Full Process Timeline
4. Client Collaboration
5. Delivery and Communication
6. Final CTA

Why Process Matters:

Headline:

Good software needs more than development.

Copy:

A successful product needs clear requirements, user-focused design, technical planning, structured development, testing, deployment, and ongoing improvement. Our process keeps the project clear from the first conversation to the final launch.

Full Process Timeline:

Step 1:

Discovery & Requirement Mapping

What happens:

We understand your business, users, goals, current workflow, technical needs, and project constraints.

Client receives:

Requirement notes, scope outline, initial feature list, risks, assumptions, suggested next steps.

Why it matters:

Good discovery prevents unclear scope, wasted development time, and wrong product decisions.

Step 2:

Product Strategy & UX Planning

What happens:

We define user roles, core flows, product structure, feature priority, and user journey.

Client receives:

Product roadmap, user flow diagrams, feature prioritization, UX direction.

Why it matters:

This turns the idea into a practical product plan.

Step 3:

UI Design & Prototyping

What happens:

We create wireframes, UI screens, design components, and clickable prototypes.

Client receives:

Figma designs, responsive layouts, prototype, design system basics.

Why it matters:

Design validation before development saves time and reduces rework.

Step 4:

Development Sprint Planning

What happens:

We break the project into clear development milestones and sprint tasks.

Client receives:

Sprint plan, timeline, milestones, delivery checkpoints.

Why it matters:

It keeps the project structured and easier to manage.

Step 5:

Full-Stack Development

What happens:

We build frontend, backend, database, APIs, admin systems, and required integrations.

Client receives:

Working product increments, codebase, API functionality, admin tools, review builds.

Why it matters:

The product becomes real through structured development and regular progress reviews.

Step 6:

AI/Automation Integration

What happens:

Where needed, we add AI workflows, automation rules, third-party integrations, or intelligent features.

Client receives:

AI workflow, integrations, automation logic, admin controls, testing flow.

Why it matters:

AI and automation should improve actual operations, not create unnecessary complexity.

Step 7:

QA, Testing & Deployment

What happens:

We test functionality, responsiveness, user flows, integrations, edge cases, and deployment readiness.

Client receives:

QA report, bug fixes, deployment setup, production launch.

Why it matters:

Testing reduces launch risk and improves product reliability.

Step 8:

Maintenance, Scaling & Support

What happens:

We support the product after launch through improvements, monitoring, updates, and scaling support.

Client receives:

Bug fixing, improvements, maintenance plan, performance support, feature expansion.

Why it matters:

Software needs ongoing care to stay stable, secure, and useful.

Client Collaboration:

Headline:

Clear communication at every stage.

Include cards:

- Discovery calls
- Requirement documentation
- Sprint planning
- Progress updates
- Review meetings
- QA feedback
- Launch support

Delivery and Communication:

Copy:

Barakode works with clients through structured updates, clear documentation, planned meetings, and transparent delivery checkpoints.

Final CTA:

Headline:

Ready to move from idea to execution?

Copy:

Tell us what you are building and we will help you define the next technical step.

CTA:

Start Your Project

14. Engagement Models Page Prompt

Create the Engagement Models page for Barakode Technologies.

Page Goal:

Present professional working models without cheap-looking pricing. Do not show “\$0”, fake packages, or low-quality pricing tables.

Hero:

Eyebrow:

Engagement Models

Headline:

Flexible engagement models for product builds, AI automation, and ongoing support.

Copy:

Every software project has a different level of complexity. We offer structured engagement models so you can start with the right level of planning, development, automation, or long-term support.

CTA:

Find the Right Model

Page Sections:

1. Hero
2. Engagement Model Cards
3. How to Choose the Right Model
4. Pricing Note
5. FAQ
6. CTA

Engagement Model Cards:

1. MVP Sprint
Best for:
Founders or teams who want to validate and launch a focused MVP.

Included:

- Discovery
- Feature planning
- UI/UX design
- Core product development
- Admin panel
- Basic integrations
- QA
- Launch support

Typical timeline:

4 to 10 weeks depending on scope.

Pricing:

Custom quote after discovery.

CTA:

Plan an MVP

2. Custom Product Build

Best for:

Businesses building a full web app, mobile app, SaaS platform, or custom system.

Included:

- Product strategy
- UI/UX
- Frontend
- Backend
- Database
- APIs
- Integrations
- QA
- Deployment

Typical timeline:

8 to 20+ weeks depending on complexity.

Pricing:

Custom quote based on scope.

CTA:

Discuss a Product Build

3. AI Automation Sprint

Best for:

Companies that want to automate one workflow or test an AI use case.

Included:

- Workflow discovery
- Automation planning
- AI prototype
- Integration setup
- Admin/review flow
- Testing

- Documentation

Typical timeline:

2 to 6 weeks.

Pricing:

Custom quote based on workflow complexity.

CTA:

Explore AI Automation

4. Dedicated Product Team

Best for:

Companies needing ongoing engineering capacity.

Included:

- Developer/team allocation
- Project manager or tech lead
- Sprint planning
- Development
- QA
- Weekly reporting
- Long-term roadmap support

Typical timeline:

Monthly engagement.

Pricing:

Monthly retainer or dedicated team quote.

CTA:

Build a Dedicated Team

5. Maintenance & Support

Best for:

Live products that need updates, bug fixes, scaling, and technical support.

Included:

- Bug fixes
- Monitoring
- Updates
- Performance improvements
- Security patches
- Small feature improvements

- DevOps support

Typical timeline:

Monthly support plan.

Pricing:

Monthly retainer based on product needs.

CTA:

Maintain My Product

How to Choose:

Create a comparison section:

- Have a new idea? Choose MVP Sprint.
- Need a complete platform? Choose Custom Product Build.
- Want to automate one workflow? Choose AI Automation Sprint.
- Need long-term development capacity? Choose Dedicated Product Team.
- Already have a live product? Choose Maintenance & Support.

Pricing Note:

Headline:

Why we do not use one-size-fits-all pricing.

Copy:

Software scope depends on features, integrations, users, platforms, data, security needs, and long-term goals. Instead of showing misleading fixed prices, we review your project and recommend the right scope, timeline, and engagement model.

FAQ:

- Do you offer fixed-price projects?
- Can we start with a smaller scope?
- Do you offer monthly retainers?
- Can we hire a dedicated team?
- How do you estimate timeline and cost?
- Can you support after launch?

Final CTA:

Headline:

Not sure which model fits your project?

Copy:

Share your project goals and we will recommend the best starting point.

CTA:
Find the Right Model

15. Contact Page Prompt

Create the Contact page for Barakode Technologies.

Page Goal:

Create a high-converting, professional contact page that qualifies leads and encourages serious project inquiries.

Hero:

Eyebrow:

Contact Barakode

Headline:

Tell us what you want to build, automate, or improve.

Copy:

Share a few details about your project and we will respond with the best next step, whether that is a strategy call, technical review, MVP plan, or automation discovery.

CTA:

Send Project Details

Page Structure:

1. Hero
2. Contact Form

Copy:

Send us the details and we will help you understand the right technical direction.

CTA:

Send Project Details

16. FAQ Page Prompt

Create the FAQ page for Barakode Technologies.

Page Goal:

Answer common questions from startup founders, SaaS founders, business owners, agencies, and international clients. The FAQ should reduce friction and support conversion.

Hero:

Eyebrow:

FAQ

Headline:

Questions before starting a software or AI automation project?

Copy:

Here are answers to common questions about working with Barakode Technologies, our services, process, timelines, pricing, ownership, and support.

CTA:

Ask a Project Question

Page Structure:

1. Hero
2. FAQ Categories
3. CTA Section

FAQ Categories:

- Services
- Process
- AI Automation
- Pricing & Engagement
- Communication
- Ownership & Support

Services FAQs:

Q: What type of projects does Barakode work on?

A: Barakode works on MVPs, SaaS platforms, web apps, mobile apps, internal business systems, AI automation workflows, dashboards, admin panels, and product maintenance.

Q: Do you work with startups?

A: Yes. We help startup founders plan, design, build, and launch focused MVPs and SaaS products.

Q: Can you help with an existing product?

A: Yes. We can review, improve, redesign, maintain, or extend existing software products depending on the current codebase and business goals.

Q: Do you build mobile apps?

A: Yes. We build mobile applications using modern cross-platform technologies where suitable.

AI Automation FAQs:

Q: Do you offer AI automation?

A: Yes. We build practical AI workflows such as AI chatbots, RAG assistants, document processing, CRM automation, support automation, and reporting automation.

Q: Can AI automate our whole business?

A: Not always. Some decisions should stay human-led. We focus on workflows where AI can create practical value with proper controls and human oversight.

Q: Can you connect AI with our existing tools?

A: Yes. We can connect AI workflows with CRMs, databases, documents, dashboards, APIs, and other business tools where integration is available.

Process FAQs:

Q: How does the project process work?

A: We usually start with discovery, then move into planning, UX design, development, testing, deployment, and support.

Q: Do you create designs before development?

A: Yes. For most products, we recommend UX planning and UI design before development to reduce confusion and rework.

Pricing FAQs:

Q: How do pricing and timelines work?

A: Pricing and timelines depend on scope, features, integrations, platforms, and complexity. We provide a custom quote after understanding the project.

Q: Do you offer fixed-price projects?

A: Yes, where the scope is clear. For ongoing work or evolving products, a retainer or dedicated team model may be better.

Communication FAQs:

Q: How do you manage communication?

A: We work through structured updates, planned meetings, shared documentation, and clear delivery checkpoints.

Q: Do you work with international clients?

A: Yes. Barakode is based in Pakistan and works with clients internationally through remote collaboration.

Ownership & Support FAQs:

Q: Will we own the code?

A: Ownership terms should be agreed before the project starts. In most custom development projects, clients receive ownership based on the agreed contract.

Q: Can you sign an NDA?

A: Yes, where required.

Q: Do you provide support after launch?

A: Yes. Barakode offers maintenance and support for products that need ongoing improvements, bug fixes, monitoring, and scaling.

17. Blog / Insights Page Prompt

Create the Blog / Insights page for Barakode Technologies.

Page Goal:

Create an SEO-friendly insights hub that builds authority around product engineering, SaaS development, AI automation, internal systems, and software strategy.

Hero:

Eyebrow:

Insights

Headline:

Practical insights on product engineering, SaaS, and AI automation.

Copy:

Explore guides, ideas, and practical advice for founders and businesses building software products, improving workflows, or exploring AI automation.

CTA:

Explore Articles

Page Structure:

1. Hero
2. Featured Article
3. Blog Categories
4. Article Grid
5. Newsletter/CTA Section

Blog Categories:

- Product Engineering
- SaaS & MVP Development
- AI Automation
- Internal Systems
- Startup Technology
- UX/Product Design
- Cloud & Maintenance
- Case Studies

Article Card Layout:

Each card should include:

- Category
- Title
- Short excerpt
- Date
- Author
- Reading time
- Featured image
- CTA: Read Article

Blog Topic Placeholders:

1. How to plan an MVP before hiring developers
2. MVP vs full product: what should startups build first?
3. How AI automation can reduce manual business workflows

4. What is a RAG chatbot and when should a business use one?
5. How to turn spreadsheets into an internal business system
6. What makes a SaaS product scalable?
7. Web app vs mobile app: which should your business build first?
8. How to choose the right tech stack for your MVP
9. Why software projects fail before development starts
10. How to prepare a software project brief
11. What to include in a SaaS admin dashboard
12. How AI can help with customer support automation
13. When to rebuild an existing product instead of patching it
14. How to estimate timeline for a custom software project
15. Product discovery checklist for founders
16. What is product engineering?
17. How to use AI responsibly in business workflows
18. Benefits of custom internal systems for growing teams

18. Technologies Page Prompt

Create the Technologies page for Barakode Technologies.

Page Goal:

Show technical capability without overwhelming non-technical buyers. Present the technology stack as a support for product engineering, not as a random list of tools.

Hero:

Eyebrow:

Technologies

Headline:

Modern technologies for scalable software products.

Copy:

Barakode uses proven tools, frameworks, and cloud technologies to build web apps, mobile apps, SaaS platforms, internal systems, and AI-powered workflows.

CTA:

Discuss Your Tech Stack

Page Structure:

1. Hero
2. Technology Philosophy
3. Technology Categories
4. How We Choose Tech
5. Integration Capabilities
6. CTA

Technology Philosophy:

Headline:

The right stack depends on the product, not trends.

Copy:

We choose technology based on product goals, user needs, scalability, maintainability, integrations, team requirements, and long-term support.

Technology Categories:

Frontend:

- React
- Next.js
- TypeScript
- Tailwind CSS

Backend:

- Node.js
- NestJS
- Python
- Django
- FastAPI

Mobile:

- React Native
- Flutter

AI:

- OpenAI
- LangChain
- RAG pipelines
- Vector databases
- Document processing
- AI workflow orchestration

Cloud & DevOps:

- AWS
- Azure
- Docker
- Kubernetes
- CI/CD pipelines
- Monitoring tools

Databases:

- PostgreSQL
- MongoDB
- MySQL
- Redis

Design:

- Figma
- Design systems
- Prototyping
- Product design handoff

Integrations:

- Payment gateways
- CRM APIs
- Email systems
- Calendar tools
- Analytics tools
- Webhooks
- Third-party APIs

How We Choose Tech:

Create cards:

- Product requirements

- Scalability needs
- Budget and timeline
- Integration needs
- Security requirements
- Maintenance needs
- Team familiarity
- Long-term roadmap

Integration Capabilities:

Headline:

We connect products with the tools businesses already use.

Copy:

From CRMs and payment gateways to AI APIs, dashboards, email tools, and internal systems, Barakode builds integrations that help products work smoothly inside the business.

Final CTA:

Headline:

Need help choosing the right technology direction?

Copy:

Tell us what you are building and we will help you identify the right stack and architecture.

19. Footer + Navigation Prompt

Create the global header, navigation, mobile menu, and footer for Barakode Technologies.

Header Requirements:

Use a clean sticky header.

Desktop Header:

- Logo left
- Navigation right or center
- CTA button on far right

Header Menu:

- Services
- AI Automation

- Case Studies
- Process
- Engagement Models
- About
- Contact

CTA Button:

Book a Strategy Call

Services Dropdown:

Create a clean mega menu with short descriptions.

Dropdown items:

1. MVP & SaaS Product Development
Description:
Launch scalable MVPs and SaaS platforms.
2. Custom Web & Mobile App Development
Description:
Build web and mobile apps around real business needs.
3. AI Automation & AI Integration
Description:
Automate workflows with practical AI systems.
4. Internal Business Systems
Description:
Replace manual operations with reliable digital systems.
5. Cloud, DevOps & Maintenance
Description:
Keep products stable, secure, and ready to scale.
6. UI/UX Product Design
Description:
Design clear product experiences before development.

Mobile Menu:

Use hamburger navigation.

Include all main links.

Show Services as an expandable dropdown.

Place “Book a Strategy Call” as a full-width button at the bottom.

Footer Requirements:

Create a premium footer with 5 columns.

Column 1:

Company Description:

Barakode Technologies helps startups and growing businesses build scalable software products, internal systems, and AI-powered workflows.

Footer CTA:

Have a product or workflow to build?

Start a Conversation

Column 2:

Services

- MVP & SaaS Product Development
- Custom Web & Mobile App Development
- AI Automation & AI Integration
- Internal Business Systems
- Cloud, DevOps & Maintenance
- UI/UX Product Design

Column 3:

Company

- About
- Process
- Case Studies
- Engagement Models
- Contact

Column 4:

Resources

- Blog
- FAQs
- Technologies
- Privacy Policy
- Terms of Service

Column 5:

Contact

- [Add official email]
- [Add official phone/WhatsApp]
- Pakistan, serving international clients
- LinkedIn
- Facebook
- Instagram, only if active and professional

Footer Bottom:

- Copyright: © Barakode Technologies. All rights reserved.
- Privacy Policy
- Terms of Service

Design Notes:

- Use dark footer background
- Keep spacing premium
- Use clear links
- Add subtle grid or gradient detail
- Keep social icons minimal
- Do not clutter the footer
