Smart Mobile Hiring Platform Connecting Mentors & Talent in Real-Time

Overview.
MentorMe is an Android application built using Kotlin that streamlines the mentor-hiring process. Whether you're looking for a tech mentor, startup advisor, or soft skills trainer, MentorMe connects you to verified experts in real-time. Designed for on-the-go hiring, the app provides a smooth interface for browsing, booking, chatting, and rating mentors — all from your phone.

Core Features.
Real-Time Search & Filters: Search mentors by expertise, availability, and rating
One-Tap Booking: Instant session scheduling with calendar integration
In-App Chat: Real-time communication between mentees and mentors
Rating & Feedback: Reviews ensure quality and reliability
Mentor Dashboard: Manage requests, earnings, and availability
Profile Management: Rich mentor/mentee profiles with skills, bio, and video intro
Kotlin-Based Architecture: Built with clean MVVM and Jetpack components

- Tools.**
- Kotlin (Jetpack Compose + ViewModel + Navigation)
 - Firestore (Authentication, Firestore, Real-Time Chat)
 - Glide (Image loading)
 - Google Calendar
 - API (Booking sync)
 - Room DB (Local session history)
- Process.**
- User Onboarding: Sign-up with Google, choose "Mentor" or "Mentee"
 - Mentor Browsing: Filter based on skills, price, language, and availability
 - Booking Flow: Book a slot and get calendar & chat access
 - Live Chat & Session: Communicate before/during the mentorship session
 - Rate & Pay: Provide feedback and complete the session
 - Mentor Dashboard: Track earnings, sessions, and profile visibility

- Methodologies.**
- MVVM architecture for scalable and testable code
 - Firestore's real-time database for seamless chat
 - Firestore Cloud Messaging for booking/session notifications
 - Modular reusable UI components with Jetpack Compose
 - Agile development cycle with continuous testing

- Challenges**
- Syncing real-time calendars across time zones
 - Managing booking conflicts and cancellations
 - Real-time chat optimization with low latency
 - Ensuring smooth UI across device densities and Android versions

User Interface & Design

- Results, Learnings, and Impact**
- Delivered a fully functional MVP used by 100+ early adopters
 - Achieved 98% crash-free sessions (Firebase Crashlytics)
 - Users reported a 40% faster mentor-matching time compared to web-based alternatives
 - Learned efficient use of Kotlin coroutines, Jetpack Compose animation APIs, and Firestore indexing
